Secure

Are you sure hackers aren't interested in your business?

Hackers are Opportunistic

Supporting a business's IT needs has changed dramatically in recent years and will continue to do so. Previously IT support was reactive. Sally has an issue with Outlook and ever since her computer isn't working properly. Normally her next step is to call the tech to get it fixed. We will always help Sally with her Outlook, but we will also provide you with confidence that Sally is trained to know not to click on a potential security risk in her Outlook, and even if she slips and does click on that bad link, we have the environment protected with our 6 pillars.

Defend and protect your business with our *Security First* approach

Summit Systems Security Pillars

User Education

We include security training for your employees as part of our services to reinforce the last line of defense against security breaches.

System Updates

We ensure your workstations and servers are updated with the latest updates to protect you from new critical vulnerabilities.

Firewall Management

We deploy updates and enhancements to your network infrastructure protecting you from potential vulnerabilities.

Endpoint Protection

We monitor and ensure all servers and workstations are up to date with the latest end point protection.

Backups

We ensure backups protect your critical and verify it by performing regular test restores.

Third Party Patching

We leverage tools that maintain common 3rd party applications.

Summit Systems specializes in the design, deployment, security, support, and strategic plan of your IT systems.
